The revolutionary glueless installation system

CLASSEN®
megaloc

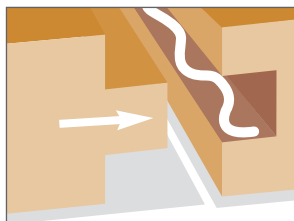

Fast. Faster. Megaloc.

Laminate-installation systems – a brief chronology

Yesterday:

The first available laminate flooring on the market had a glued tongue and groove connection.

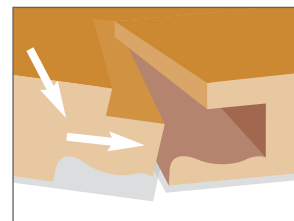

Today:

Generally, installation systems are differentiated between installation with or without the use of tools.

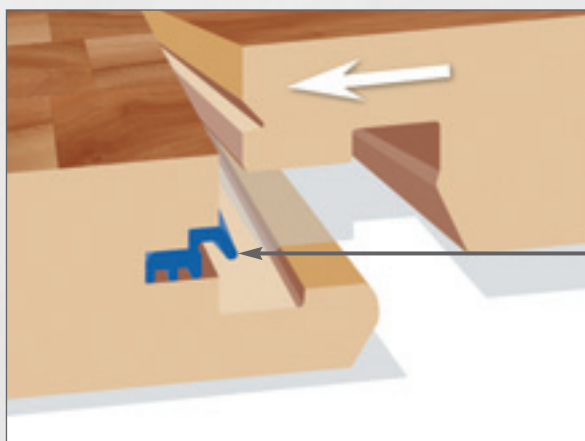

Example of a glueless installation system used with tools.

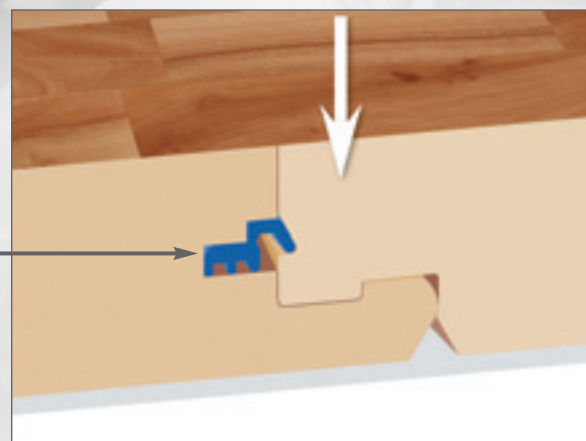

Tool-free installation system EasyConnect made by **CLASSEN®** using the so called angle-angle-process.

The future:

Attach new floorboard on the long side by inserting the tongue in to the groove of the starting row. Connect to the adjacent panel by lowering it.

Interlock clip

A little pressure of the thumb onto the cross section of the short side and the new floorboard will connect with a click sound.

The megaloc-principle:

The interlock clip provides high joint stability and consistently prevents the unlocking of the megaloc-connection on the short side.

CLASSEN® megaloc has the EU-Patent No. 1 415 056.

The trendsetting installation system for all flooring formats, especially for extra wide floorboards.

Performance features:

Unique:

CLASSEN® megaloc is applicable for all floorboard formats as an independent installation system: narrow to extra wide (i.e.: laminate flooring with tile decor), from seven millimetres up to panel thickness of finished parquet.

Simple:

Even for a beginner it is a user friendly installation system: insert, lower... finished!

Quick:

More area can be installed in less time.

Strong:

The **CLASSEN® megaloc** connection is perfectly suitable for rolling chairs and sets new standards for this installation system in regards to point stability at the connection joint. Approved alignment height difference: less than 0,1 mm at 80 kg point load. The practical values are achieved using a two millimetre polystyrofoam base. The tensile strength of **CLASSEN® megaloc** at 2,5 kN/m is clearly better than the values set out in the new test standards currently under development.

Durable:

The actual innovation of the Megaloc-installation System is the integrated interlock clip made of PET. Due to the durability of this PET clip, the clip will resist wear and deformation. The clip is heat resistant up to 80° C, break resistant and rigid. PET is known primarily as packing material for refreshments by the end customer and therefore has a positive image in regards to health compatibility, which is confirmed by the certification from the FDA (U.S. Food and Drug Administration).

CLASSEN® megaloc

The installation system with obvious benefits:

- ☛ up to three times faster than previous installation systems, i. e.: up to three times more area can be installed in the same time
- ☛ virtually able to install without tools, additional pounding of panels is not necessary i. e.: hammer, impact block are not necessary
- ☛ easy to install even in difficult installation situations

CLASSEN® megaloc inside

Your options as a megaloc-licensed partner

CLASSEN® megaloc is a highly innovative locking application and is therefore initially not bound to a product. Primarily it was developed for the simple laying of premium laminate flooring made by **CLASSEN®**. It can easily be used for other types of floorcovering.

For manufacturers/distributors

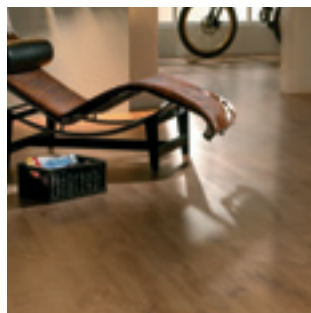

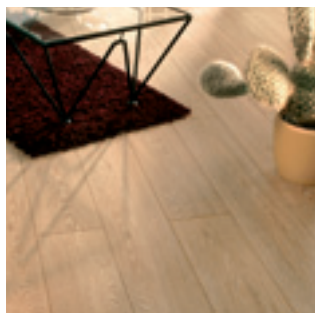

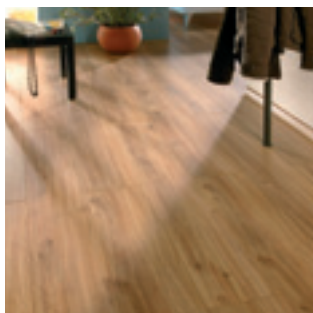

For manufacturers or distributors we offer two options using

CLASSEN® megaloc as a license:

- You manufacture your flooring under license with the **CLASSEN® megaloc**-system.
- You use – i.e.: to expand your product portfolio – the product know-how of one of the worlds leading laminate manufacturers to incorporate the premium **CLASSEN®**-laminate flooring in a private label.

For retail

For retail, at **CLASSEN® megaloc** we offer a balanced assortment of premium laminate flooring under the trade marks **CLASSEN®** and **wiparquet®**. However, for the retailer there is the option as a licensed partner of using the **CLASSEN®**-laminate flooring as a private label. Whichever way you choose, the flooring fitted with the quick installation system **CLASSEN® megaloc** offers the option of generating improved margins with a consistently marketable premium-price policy.
